Admin Start Page

[Start local auction]
[Start/view live item]
[Add item?] [_____]
[Show current winners]

[Start local auction] generates a local code which allows users to see the items. Before this is generated, [Start/view live item] and [Show current winners] are disabled

Admin Header on all Broadcasted Pages

[Local Code [# # #]]   expires in 12 hrs.

After the local code is generated, [Start local auction] is removed and a button [end local auction] is placed at the very bottom. This button requires a confirmation screen. Any user connected when this button is pushed is kicked back to the Local Code Page w/error msg.

If there is no current live item [Start/view live item] will take the admin to a live item catalog page where he/she can pick an item to auction

[SORT]

item thumbnail is identical for admin & user
sort is identical for admin & user

Only difference btwn live item catalog page is admin won't have the header

Live Item Page

> Item Name
>
> | Item pic |
>
> Beginning Price
>
> (Start live auction)
>
> Item Desc.

(Start live auction) will redirect the admin to the Admin Menu Page

And generate a new window to broadcast the live auction
